

## 11 BLUEWELLO PH BOOSTER

## BWPW-12

### BASIC CHARACTERISTICS

- pH Booster is an essential natural mineral based formulation specially blended for packaged drinking and food processing industry, food grade, nontoxic formulation designed for effective results in drinking water application and food processing which retains a sweet and natural taste and characteristics of water.
- pH booster is designed to balance the pH of RO water or low pH water.
- Enhances taste of water by adding the essential mineral.
- Can be directly dosed in final or product water.
- 100% safe and food grade formulation.

### APPLICATION

- Packaged Drinking water Industry to balance the pH and TDS of product water.
- Food processing industry for specialized applications.
- Breweries to maintain the pH of final water for blending.
- Beverage industry to make carbonated & non-carbonated beverages as pH booster.

### SPECIFICATIONS

Appearance	Clear pale yellow color liquid
pH @ 30°C	8.0 – 10.0
Specific Gravity	1.14 – 1.16
Active content	78.0% ± 1.0%
Solvent Solubility	Completely soluble in water

### DOSAGE

The composition of active ingredients is designed to provide instant pH boosting inline application in water stream provides a good control over low pH and low TDS. Doses can be calculated as per the product water pH & TDS composition.

Please take help of our technical team to calculate the doses as per your system output water composition.

### STORAGE

pH booster should be stored in tightly-sealed original containers in a cool place, dry and shaded place.
